

ICON FD 6-7 ALFALFA

Strong in adaptation.

ICON is one of the most widely grown alfalfa varieties in the world. Adaptation to the semi-dormant growing areas of the world is the highlight of this variety. The ability to withstand moderate winters and variable growing condition make this variety a real winner. High levels of resistance to both Blue and Spotted aphids keep production levels high even when stressful conditions allow these pests to infest other alfalfa varieties.

Adapted to semi-dormant growing areas worldwide.

Highly resistant to Spotted Aphids

Highly resistant to Pea Aphids

Yield of a non-dormant with the persistence of a dormant alfalfa
